Education

York University

Bachelor of Science in Computer Science (Honours)

Toronto, Canada

January 2020 – December 2024

Experiences

Software Engineer

October 2023 – January 2024

Privex

London, United Kingdom

- Developed an AI customer service agent using RAG techniques on a self-hosted LLM, reducing staff response workload for common inquiries related to technical issues, products, and services.
- Implemented REST APIs in Flask for interfacing with the LLM, integrated with Discord APIs to enable customer queries and on-demand data updates by staff.
- Developed data management workflows to curate and update existing data in the database and ingest new data from multiple sources, including website documentation, bulk uploads, support tickets, and staff announcements.
- Built and managed data infrastructure using vector databases and MySQL for efficient training data storage, with systemd service files and monitoring scripts to ensure reliability and automated error recovery.
- Tech Stack:** Python, Flask, ChromaDB, Langchain, MySQL, Linux

Software Engineer

April 2019 – December 2019

CogniPet

Zürich, Switzerland

- Developed a Pet Breed Detection system using the Xception neural network and transfer learning in Keras, achieving 94% accuracy across 120 dog breeds.
- Implemented REST APIs in Flask for model inference and integrated them with CogniPet's Android and iOS apps using Amazon Web Services (AWS).
- Experimented with video-based techniques for a pet facial recognition system by collecting data from dogs and analyzing features from multiple frames.
- Tech Stack:** Python, Flask, Keras, AWS (EC2, S3)

Founder and Developer

August 2017 – July 2019

TaffyHub.com

- Developed and launched a school-specific social networking platform for fellow students, reaching over 500+ registered users with 150+ daily active users.
- Implemented key features including news feed, blog publishing system, Q&A system, friend search, and profiling system.
- Built the backend using PHP and MySQL, handling approximately 100 posts per day.
- Configured Nginx reverse proxies for load balancing, caching static files and media, and used Memcached to speed up query performance.
- Managed full DevOps lifecycle including server setup, automated backups, and system maintenance.
- Tech Stack:** PHP, JavaScript, MySQL, Memcached, Linux (rsync, cron)

Projects

[Jix Interpreter](#) | C Interpreter

- Developed an interpreter for a dynamically typed programming language.
- Implemented fault-tolerant parsing and error handling, arrays, function pointers, loops, nested blocks, recursion, built-in functions, conditional statements, and control flow statements.
- Implemented basic functional programming support, including first-class and higher-order functions.
- Tested using automated tests with CI/CD pipelines.
- Tech Stack:** C, CMake, GDB, GitHub Actions

[Blueth](#) | C++ Networking Library

- Developed a highly concurrent and event-driven networking framework for Linux.
- Implemented event-loop abstractions, HTTP parsers, proxies, thread-pool executors, and codec parsers.
- Implemented thread-safe cache containers and synchronization mechanisms for multithreaded environments.
- Tested using automated tests with CI/CD pipelines.
- Tech Stack:** C++, Linux (epoll, pthreads), CMake, GitHub Actions

Technical Skills

Languages:	Python, Java, C++, C, SQL, JavaScript, Go, PHP, Perl, Bash, HTML/CSS
Technologies:	Linux, MySQL, Docker, Kubernetes, Node.js, MongoDB, Memcached, Redis, AWS, Neo4j
Developer Tools:	Git, GDB, CI/CD, Linux Containers (LXC/LXD)
AI/ML Tools:	Langchain, LlamaIndex, ChromaDB, Keras, PyTorch
Frameworks:	Flask, Django, JUnit
